AccelOps IT Operations Management Solution Now Available Through Okta's Application Network to Enable Secure Identity Management in the Cloud

Software leaders partner for single sign-on, identity management and IT infrastructure monitoring in the cloud

OKTANE13 CONFERENCE, SAN FRANCISCO – Nov. 5, 2013 - AccelOps, the leader in analytics-driven IT Operations Management for cloud and virtualized infrastructures, has partnered with Okta to offer IT infrastructure security, performance and availability monitoring access.

The millions of users who benefit from Okta's enterprise-grade identity management service, including single sign-on, user management and on-premises identity integration capabilities, can now access their AccelOps solution through the Okta Application Network (OAN). AccelOps' virtual appliance software manages security, network performance and compliance, all on a single screen. AccelOps automatically discovers, analyzes and automates IT issues in machine and big data across organizations' data centers and cloud resources, spanning servers, storage, networks, security, applications and users.

AccelOps will showcase its solution at OKTANE13, Okta's user conference this week, running through Nov. 5 in San Francisco.

The OAN is a full catalog of more than 3,000 pre-integrated applications that are continuously validated, always up-to-date, and constantly growing both in number and capability. With AccelOps now available in the OAN, customers now benefit from point-and-click provisioning for their IT environment. As a result, IT organizations improve security and ensure compliance knowing that employee access is managed and secured through Okta, while users benefit from a single, simplified login experience.

"Being part of the Okta Application Network exposes our powerful AccelOps solution to millions of users all over the globe," said Dan Maloney, vice president of Sales and Marketing at AccelOps. "Okta allows our customers to simplify user identity and access, as well as change management, in the cloud, enabling them to work anytime, anywhere on their systems."

"Our enterprise-grade identity management service will enhance the AccelOps solution by empowering users worldwide to easily access their real-time IT operations data securely from any location or device," said Chuck Fontana, head of technology alliances at Okta. "Not only will AccelOps users benefit from seamless access, but IT organizations will know that user

access is secured because of Okta's rich user management capabilities built to ensure compliance without getting in the way of the user."

About AccelOps

AccelOps provides analytics-driven IT Operations Management for cloud and virtualized infrastructures. The virtual appliance software manages security, network performance and compliance, all on a single screen. AccelOps automatically discovers, analyzes and automates IT issues in machine and big data across organizations' data centers and cloud resources, spanning servers, storage, networks, security, applications and users. AccelOps' patented analytics engine with cross-correlation sends real-time alerts when deviations occur that indicate a security or performance-impacting event. The AccelOps platform scales seamlessly and provides unmatched delivery of proactive security and operational intelligence, allowing organizations to be more responsive and competitive as they expand their IT capabilities.
