Demand for Integrated Performance, Availability and Security IT Monitoring Helps AccelOps Achieve 250% Growth

SANTA CLARA, CALIF. - July 17, 2012 - AccelOps, Inc., a pioneering developer of next generation security, network, and data center monitoring software, today announced that it has achieved 250% year-on-year growth for the quarter ended June 30, 2012. The company continued to expand its customer base in the managed service provider segment and in the education, healthcare, and financial services sectors. During the just ended quarter the company also added its first customer in professional sports, and several new technology and retail customers.

Customers chose AccelOps software over other solutions because it provides a unique unified "single pane of glass" view for Security Information and Event Management (SIEM), Performance and Availability Monitoring (PAM) that works across their entire IT infrastructure –physical, virtual, on-premise, and cloud-based. This unified system is more effective, less costly, and easier for network and security administrators to use because it can replace several other point tools.

More information about AccelOps is available online at www.accelops.com.

About AccelOps

AccelOps provides a new generation of integrated security, network, and data center monitoring and management software for dynamic and virtualized data centers. Based on big data scale-out architecture and patent-pending distributed real-time analytics technology, AccelOps automatically analyzes and makes sense of behavior patterns spanning server, storage, network, virtualization and applications to rapidly detect and resolve problems. AccelOps works across traditional data centers as well as private and hybrid clouds. Its unmatched delivery of real-time and proactive security and operational intelligence allows organizations be more responsive and competitive as they expand the IT capabilities that underpin their business.
