AccelOps Added to GSA Contract under IT Schedule 70

Contract simplifies purchase of integrated datacenter security, performance, and availability monitoring software for government agencies.

SANTA CLARA, CALIF. - May 23, 2012 - AccelOps, Inc., the leader in integrated Security Information and Event Management (SIEM), performance and availability monitoring for onpremise and cloud-based data centers, today announced that its software is now available through a United States General Services Administration (GSA) General Purpose Information Technology Equipment, Software, and Services Schedule 70 Contract. Under Contract Number GS35F0259J federal, state, and local government agencies now have a simplified channel through which to purchase AccelOps' award-winning software for monitoring the security, performance and availability of their datacenter operations in real-time.

"Government agencies need real-time 360 degree infrastructure visibility and cross-domain correlation of events," said Robert Yusin, vice president of sales at AccelOps. "They need full context monitoring in order to counteract cyber threats, comply with regulations such as FISMA, and ensure uninterrupted access to vital IT resources. AccelOps delivers next generation SIEM and unmatched full infrastructure monitoring so that security, compliance and data center professionals can work together to maintain a secure and responsive infrastructure that scales and performs to government requirements."

The GSA contract enables government agencies to easily purchase the AccelOps software, support, and any custom engineering resources they may need at pre-negotiated prices, using a streamlined process. Over 150 customers, including various government and public agencies, have already deployed a single AccelOps tool as a replacement for multiple traditional single function solutions such as SIEM, application performance management, and network monitoring tools.

About AccelOps

AccelOps provides a new generation of integrated security, network, and data center monitoring and management software for dynamic and virtualized data centers. Based on big data scale-out

architecture and patent-pending distributed real-time analytics technology, AccelOps automatically analyzes and makes sense of behavior patterns spanning server, storage, network, virtualization and applications to rapidly detect and resolve problems. AccelOps works across traditional data centers as well as private and hybrid clouds. Its unmatched delivery of real-time and proactive security and operational intelligence allows organizations be more responsive and competitive as they expand the IT capabilities that underpin their business.
