Leading Industry Analyst Firm Recognizes AccelOps as a "Cool Vendor"

SANTA CLARA, CALIF. - June 20, 2012 - AccelOps, Inc., the pioneer in integrated Security Information and Event Management (SIEM), and Performance and Availability Monitoring (PAM) for on-premise and cloud-based data centers, today announced that it has been recognized in Gartner Inc.'s "Cool Vendors in IT Operations Management 2012" report. The report highlights four vendors with innovative technologies in the IT operations management market.

AccelOps has developed unique software that combines next generation SIEM and PAM capabilities that deliver a unified, "single pane of glass" view of the entire IT infrastructure and applications. AccelOps is deployed by large enterprises and service providers to ensure end-to-end availability, performance, and security regardless of whether their infrastructure is physical, virtual, on-premise or in the cloud. Unlike point solutions for PAM, SIEM and analytics, AccelOps provides IT operations management with comprehensive functionality using a unified code base. It is built from the ground up to eliminate silos and deliver a fully integrated and continuously-learning IT management solution that is significantly faster and easier to deploy than point solution alternatives. It dynamically discovers IT resources and adapts to changing conditions in real-time. AccelOps helps security, network, and operations experts be more effective and proactive by automating complex decisions in real-time and providing rich historical analytics.

Gartner's report is authored by prominent IT Operations analysts Milind Govekar, Ronni J. Colville, and Ian Head. It provides analysis and recommendations for executives and managers of IT operations, application support and development operations. Also recognized in the report are ScaleXtreme, Terma Labs, and Veloxum. The report is available online at www.gartner.com/DisplayDocument?doc_cd=233196.

More information about AccelOps is available online at www.accelops.com.

About the Cool Vendors

Gartner does not endorse any vendor, product or service depicted in its research publications, and does not advise technology users to select only those vendors with the highest ratings. About AccelOps

AccelOps provides a new generation of integrated security, network, and data center monitoring and management software for dynamic and virtualized data centers. Based on big data scale-out architecture and patent-pending distributed real-time analytics technology, AccelOps automatically analyzes and makes sense of behavior patterns spanning server, storage, network, virtualization and applications to rapidly detect and resolve problems. AccelOps works across traditional data centers as well as private and hybrid clouds. Its unmatched delivery of real-time and proactive security and operational intelligence allows organizations be more responsive and competitive as they expand the IT capabilities that underpin their business.
